RAD MICROPHONE SHOCK MOUNTS

The RAD shock mounts provide exceptional microphone isolation from movement, handling noise and other vibrations associated with booming. All of the components are made from virtually indestructible thermoplastic elastomers using high-precision injection moulding in an ISO-9000 certified factory (no 3D printing here). The mounts come in many variations with some for universal use and others specific to a given microphone type. You can mix & match many of the different hoops and clips for the best shock isolation and setup with any your microphones.

RAD-2 Camera Shoe Mount

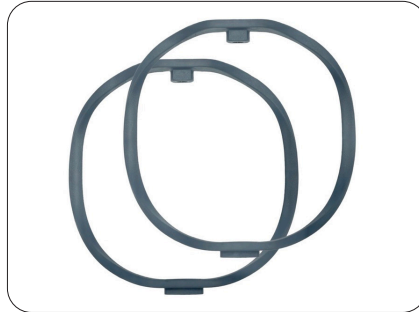

RAD “FIELD EDITION” MICROPHONE SHOCK MOUNTS

The RAD-2 Field Edition Shock Mounts are designed for use with small condenser microphones used on stands or other mounts for field recording. It provides exceptional isolation from movement and other vibrations. The Field Edition mount comes with 3 sizes of mic clips -- a pair of 19-21mm clips, a pair of 12.5-14.5mm clips and an individual 8mm (for Lemo or MZL connectors). Each mount also includes 3 pairs of suspension hoops with different levels of firmness -- standard, soft and extra soft. The suspension hoops can be spaced at 25mm or 15mm apart on the mounting bracket. The bracket also has a cable retention clip at the base and an optional one that can be mounted on the top. The mount has a 3/8 female threaded base. The Field Edition mounts are made from virtually indestructible material.

RAD CABLE STRAPS & MIC BANDS

RAD Cable Straps are made from a TPE silicone-based polymer that is latex free. The straps are designed to replace noisy or scratchy hook & loop straps. Perfect for: Cable Management, Organization with Wires/cords, Attaching to Boom Poles, to Shock Mounts & Mic Stands and General cable organization. The straps have a “cable-stay” side which locks the strap into place on the cable so it doesn’t fall off. **Radius Mic Bands** are a handy way to add a soft, silent and specific “stopping point” for slip-on windshields or foam mic gags. The bands can also be used to cover mic body switches & XLR connections and creating a moisture barrier.

MINI-ALTO BLIMP WINDSHIELDS

The Mini-ALTO is a compact and versatile microphone windshield and shock mounting system for location sound professionals. It features the award winning RAD shock mount for exceptional isolation from handling noise, an ultra-lightweight 2-part magnetic “pod” windshield that can be fitted/unfitted in seconds and a removable fur cover for added wind protection.

The Mini-ALTO has been designed to be fast and easy-to-use with almost all small condenser, short shotgun and standard shotgun sized microphones. With a diameter of just 85mm, the Mini-ALTO is the smallest “full-coverage” zeppelin windshield available in the professional audio recording industry. Even at this size, the Mini-ALTO will achieve wind reduction for up to -40dB with its included fur cover, which is comparable to larger pill-shaped windshields. The Mini-ALTO windshields come in full kits which include the windshield, a RAD-2 Mount, spare hoops with different suspension firmness, a fur windcover, a “smiley face” adaptor and a magnetic stowage holder for the windshield with a carabiner clip. The full kits are available in versions with and without custom fitted XLR cables.

NIMBUS WINDSHIELDS - GRAY FUR

The Nimbus slide-on windscreens are made in many sizes to fit shotgun, small condenser and broadcast camera-mounted microphones. It reduces up to 25dB of wind noise generated from light to moderate winds, whilst maintaining high frequency audio clarity. The specially designed rubber end caps are the only slip-on fur windscreens to incorporate small “pepper pot” hole openings to reduce air pressure near the capsule. This unique feature diminishes the “muddy or muffled” sound that can occur at some frequencies, adding extra clarity to sensitive microphones.

Two fur versions of Nimbus: Medium-length dark Gray fur or multi-pile Black fur. Both utilize an acoustic synthetic fur and a porous open cell foam internal core.

FOAM WINDSCREENS

The Radius range of condenser, shotgun and lavalier mic foams are made from high-quality acoustic foam designed to prevent plosives, boom swings swooshes and other light wind noise, whilst not interfering with high frequency audio capture. These are not cheap mic foams that turn to dust in your fingers and fade away fast. Radius foams are made in the United Kingdom using a semi-open cell material that is also resistant to UV and moisture. For shotgun microphones, the tapered foam is wider in the back to provide more side wind protection around the capsule and narrows toward the front to provide protection around the interference tube whilst allowing maximum acoustic transparency.

REPLACEMENT FUR WINDCOVERS - GRAY FUR

The Radius windcovers are made from our high-quality longer-haired synthetic acoustic fur and come with a smooth internal lining and draw string. The windcovers come in a range of standard sizes to specifically fit a variety of other known brands' windshield kits as replacement windcovers with massive cost savings.

Two fur versions: Classic Gray fur or multi-pile Black fur. Both utilize a premium quality acoustic synthetic fur made by hand with precision techniques and years of experience.
