RAD MICROPHONE SHOCK MOUNTS

The RAD shock mounts provide exceptional microphone isolation from movement, handling noise and other vibrations associated with booming. All of the components are made from virtually indestructible thermoplastic elastomers using high-precision injection moulding in an ISO-9000 certified factory (no 3D printing here). The mounts come in three variations, the RAD-1, RAD-2 & RAD-3. Each mount has universal mic clips and comes with a pair of standard firmness hoops and a pair of light (softer) hoops -- so you can get the best isolation for your style of booming with any mic you choose.

NIMBUS WINDSHIELDS

The Nimbus slide-on windscreens are made in many sizes to fit shotgun, small condenser and broadcast camera-mounted microphones. It reduces up to 25dB of wind noise generated from light to moderate winds, whilst maintaining high frequency audio clarity. The specially designed rubber end caps are the only slip-on fur windscreens to incorporate small “pepper pot” hole openings to reduce air pressure near the capsule. This unique feature diminishes the “muddy or muffled” sound that can occur at some frequencies, adding extra clarity to sensitive microphones. Each Nimbus is made using medium-length dark grey, acoustic synthetic fur and a porous open cell foam internal core.

URCHIN LAVALIER WINDSHIELDS

The Urchin windscreens are made to use with lavalier mics placed on the outside of clothing using a clip or other fixture. Each Urchin comes with a lav foam and short-length synthetic fur cover (black, grey or white) for extra wind-noise attenuation. These two layers of wind protection are perfect for interview situations when you must quickly capture audio and don't need to hide the microphones discretely beneath clothing. Urchin lav foams can also be used by themselves and fit most small-sized lav mics such as COS-11, DPA 4060 and DPA 6060. The fur covers are sized to firmly fit over the foams and most other foams / metallic screens supplied with lavalier mics. Furs will be slightly loose fitting if used over lavs without foams.

FOAM WINDSCREENS

The Radius range of condenser, shotgun and lavalier mic foams are made from high-quality acoustic foam designed to prevent plosives, boom swings swooshes and other light wind noise, whilst not interfering with high frequency audio capture. These are not cheap mic foams that turn to dust in your fingers and fade away fast. Radius foams are made in the United Kingdom using a semi-open cell material that is also resistant to UV and moisture. For shotgun microphones, the tapered foam is wider in the back to provide more side wind protection around the capsule and narrows toward the front to provide protection around the interference tube whilst allowing maximum acoustic transparency.
