LOCKIT TIMECODE SYNCHRONIZER

Since its first appearance in 1993 the “Lockit” has become synonymous for reliable on-set High Accuracy Portable Timecode synchronization of audio recorders and cameras.

The Lockit timecode system easily and intuitively synchronizes cameras and audio recorders making the alignment of captured material a one-click-operation. This workflow saves time and money, and helps you to focus on the creative tasks of the post production. Introduced in the mid 1990’s with the first Lockit box, the Lockit family has become an established system for mission-critical mobile timecode and synchronization tasks and was continuously refined. Based around a very accurate, temperature-compensated crystal oscillator (TCVCXO) the system can be calibrated in the field to a reference deviation of less than +/- 0.1ppm.

With Continuous Jam through Ambient’s ACN proprietary wireless communication network, the drift can be brought down to 0. This allows for a synchronicity typically only found in studios, and it doesn’t require hard wiring or relying on problematic RF transmission. The ACN-CL Lockit offers TC and Genlock Sync in a very small housing and simple interface.

Code	Item	Price
ACN-CL	"The Lockit" Timecode Synchronizer, Timecode and Genlock / Wordclock, ACN compatible	\$660.00
ACN-CL2NL-Set	ACN-CL Lockit and (2) ACN-NL-L NanoLockit Timecode Synchronizer Set	\$1,079.00
LockitMount	Bracket for attaching ACN-CL Lockit to cameras/cages, ARRI Pin-Lock standard with one positioning pin	\$70.00
ANT-2.4-SMA-RP	External antenna for Lockit ACN-CL & ACN-LS2, Reversed Polarity, Straight	\$24.00
ANT-2.4-SMA-RP-RA	External antenna for Lockit ACN-CL & ACN-LS2, Reversed Polarity, Right Angle	\$24.00

LOCKIT+ (PLUS) TIMECODE SYNCHRONIZER

For over 30 years, Ambient Timecode has been synonymous with precision and reliability. Like the Lockit, the Lockit+ provides all timecode and Sync formats and full ACN compatibility.

The Lockit+ is designed to serve different situations on set or in the studio. With the Standard Extension it can be elegantly operated both from the sound cart and sound bag. In future there will be different extensions available. The built-in server spans a local WiFi, giving users browser-based access to all the Lockit+ features via mobile device or computer. The web interface gives access to advanced generator settings and monitoring of all Lockit devices within the ACN. While the front of the Lockit+ offers the same two outputs you know from the Lockit (Blue TC & ACN Connector / Yellow TC & Sync Connector) - the Standard Extension provides additional connections for different setups.

Plug the separately available antenna into a USB port of the Lockit+ to perform a full frequency scan. In the web interface you get concrete suggestions for available frequencies for your transmitters and receivers. The Lockit+ stores key Cooke /i lens metadata frame-accurately in an open file format - at the same time it makes the data accessible live via WiFi or Ethernet. The Lockit+ can extract technical metadata from compatible cameras to broadcast it via WiFi to the Ambient LockitScript App for script supervisors.

Code	Item	Price
ACN-LP-E	Lockit+ (LockitPlus) with Standard Extension, Timecode Synchronizer with advanced metadata management and RF Frequency Scanning (RF Antenna not included)	\$1,906.00
ACN-LP-S	Lockit+ (LockitPlus) with Standard Extension & RF Scan Antenna, Timecode Synchronizer with advanced metadata management and RF Frequency Scanning	\$2,062.00
ACN-RF	External RF Scan antenna for Lockit+ with Standard Extension, Includes USB adaptor	\$165.00
ACN-CP	Lens Metadata Cable for Lockit+ (Lens: Cooke /i)	\$180.00
ASM Mount	Slot Mount, for attaching Lockit+ or slot receivers to cameras/cages, ARRI Pin-Lock standard with two positioning pins	\$159.00
ASM Mount Mini	Slot Mount Mini, for attaching Lockit+ or slot receivers to cameras/cages, ARRI Pin-Lock standard with one positioning pin	\$70.00

NANOLOCKIT TIMECODE SYNCHRONIZER

The small, wireless and easy-to-use timecode generator! For 25 years, the Ambient Lockit is the market leading portable, timecode and sync generator worldwide. The NanoLockit is the smallest member of the Lockit Family.

The NanoLockit is designed to be the most intuitive, reliable, and easy-to-use timecode generator for all applications. Additionally, the unit features everything you need for high-end feature film and serial drama production while it is fully compatible with the market-leading ACN Lockit timecode system. **Now with Logging feature! Learn more at logger.ambient.de**

The buttons control all important functions. There's no need for an app to adjust settings in the field. Use the built-in real time clock or feed in external timecode via the LEMO port. Syncing up even the most complex gear setup is literally a one button experience.

After being set to the internal Real Time Clock or jammed by external timecode, any NanoLockit can wirelessly jam sync all other units on the set. The framerate is set automatically when jammed and does not require connection to an app or in-depth menu navigation.

Code	Item	Price
ACN-NL-L	NanoLockit Miniature Timecode Synchronizer, with Logging feature, Lemo 5-pin connection, ACN compatible	\$219.00
ACN-NL-LD	Double-Pack of NanoLockit Miniature Timecode Synchronizer, with Logging feature, Lemo 5-pin connection, ACN compatible	\$429.00
	<i>*NanoLockit does not include a Timecode cable, see Page 8 for list of common TC cables for NanoLockit</i>	
NL Bracket	NanoLockit camera cage mounting bracket, 3/8" screw, ARRI Pin-Lock standard	\$99.00

LOCKITSLATE TAKE 2 TIMECODE SLATES

The ACN-LS2 LockitSlate Take 2 timecode slate is a highly accurate smart-slate system featuring a unique product design & functionality. The completely revised LED timecode display features double the brightness at less than half of the power consumption of its predecessor. This allowed us to reduce the batteries to only 4 AA cells while still achieving prolonged battery life. Additionally, we equipped the new slate with light and motion sensors. Thus, the brightness can adjust automatically to the local light conditions, and the timecode display flips when the slate is turned upside down. The easy removable handle allows for perfect one-handed operation.

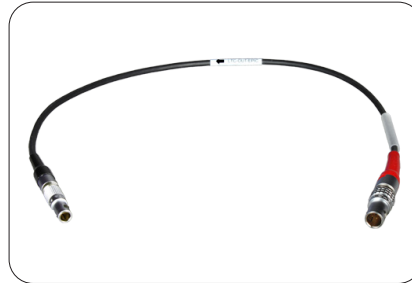

With its all-new and revolutionary modular construction, the electronic section of the LockitSlate can also serve as a fully functional, compact standalone display for documentary or desktop use. Housed in a machined, pearl-blasted and anodized aluminum body, it can easily withstand the roughest production conditions.

Thanks to the built-in supercapacitor, the LockitSlate Take 2 is able to hold the highly accurate timecode for more than 10 minutes after loss of power. Changing batteries no longer automatically means re-jaming the slate.

CARBON FIBER BOOM POLES

For more than 20 years Ambient Recording has produced professional carbon fiber boompoles designed to withstand roughest production conditions. The tubes used for our products are not off the shelf items but specially manufactured to our own specification using upscale yet still affordable Hi-Q modulus carbon fibers. This high quality has made Ambient the leading manufacturer for professional booms in many parts of the world.

QP5 SERIES 5 SEGMENT PREMIUM BOOM POLES

The all new QP5 series was specifically designed for Film, documentary and ENG booming work. That's why we built the QP5 series poles with 5 segments, effectively delivering a better collapsed to extended ratio. This enables easy transportation while providing long lengths when needed. Available standard or with coiled or straight internal cables. Six boom lengths available up to 20.7' fully extended.

With an understanding of the rigors that the material must endure in everyday work situations, we designed the QP5 pull-braiding HM carbon fiber tubes with a 1mm wall thickness to achieve light-weight with the highest durability properties.

While all mechanical parts are machined out of aircraft aluminum, the 3/8" thread is made out of solid stainless steel to survive thousands of microphone changes. Internal redesigned bushings ensure rattle-free operation and no seizing by dirt, humidity or cold temperatures.

Ambient offers different internal cabling options with multiple connector outlet variations to prevent cable "Spaghetti" when that critical situation occurs. The cabled booms are equipped with in-house manufactured, ultra-thin cables optimized for field audio conditions. With an effective shielding and a polyurethane insulation, these durable cables provide excellent endurance while maintaining flexibility even in temperatures as low as -72° F.

CARBON FIBER BOOM POLES

For more than 25 years Ambient Recording has produced professional carbon fiber boompoles designed to withstand roughest production conditions. The tubes used for our products are not off the shelf items but specially manufactured to our own specification using upscale yet still affordable Hi-Q modulus carbon fibers. This high quality has made Ambient the leading manufacturer for professional booms in many parts of the world.

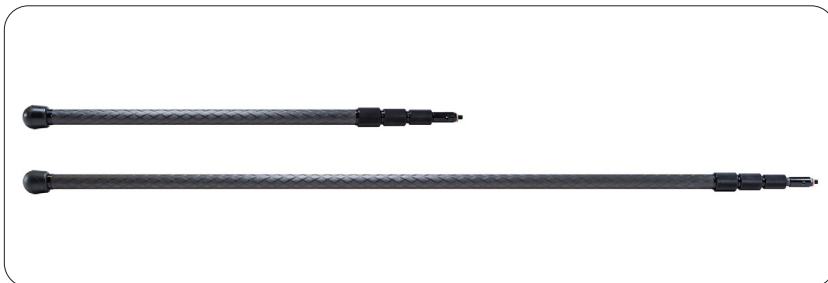

QPSLIM SERIES 4 SEGMENT PREMIUM BOOM POLES

Our QuickPole Series boompoles are the perfect symbiosis of stability and lightness. This makes the QuickPole the ideal tool for the boom operator with high demands. Although our regular QuickPole Series 5 is very popular, we have received some feedback from customers who loved our old 4-segment QS line. The request for a thinner version of the QP5 has now been fulfilled. A special thanks to veteran boom operator Allen Williams from Sound Speeds for his great input during the design process.

QuickPole Slim vs. QuickPole

Compared to the regular QuickPole Series 5, the Slim Edition has the following differences:

- Thinner diameter (30 mm instead of 34 mm)
- Lighter (one segment less)
- Black tip

While all mechanical parts are machined out of aircraft aluminum, the 3/8" thread is made out of solid stainless steel to survive thousands of microphone changes. Internal redesigned bushings ensure rattle-free operation and no seizing by dirt, humidity or cold temperatures.

Ambient offers different internal cabling options with multiple connector outlet variations to prevent cable "Spaghetti" when that critical situation occurs. The cabled booms are equipped with in-house manufactured, ultra-thin cables optimized for field audio conditions. With an effective shielding and a polyurethane insulation, these durable cables provide excellent endurance while maintaining flexibility even in temperatures as low as -72° F.

MICROPHONE POWER SUPPLY

The new **UMP III** was completely redesigned for the modern boom operator using Phantom microphones on a “wireless boom” with typical belt pack transmitters.

The case is very light and using the popular rechargeable NP-50 battery avoiding drain of the transmitter’s batteries and can be mounted at the boom tip. The autonomous supply avoids additional drain of the belt pack’s batteries and thus ensures long battery lifetime plus making the unit compatible with any transmitter with mic-level input.

The UMP III is compatible with any transmitter with mic-level input. Input and output connectors allow for individual configuration and are keyed against accidental interchange. A multi-colored LED interface indicates battery status and selected powering mode that covers 12 and 48 Volt Phantom plus 12 V T-power.

The “**PhanToMizer**” cable offers an economic alternative to operate 12 Volts T-powered condenser microphones on microphone inputs which supply only +48V Phantom Power. An electronic circuit is built into the XLR-3M connector to adapt the voltage and block the Phantom Power from pin 3.

HYDROPHONES

The **ASF-1 MKII** is completely designed and manufactured by Ambient Recording in response all the requests for an affordable, yet professional hydrophone for working with standard audio gear. The goal was nothing less than to create a very natural sounding, low noise underwater microphone. Well, it took us nearly 3 years but finally we did it. With the development of the Ambient “Sound Fish” we focused on high audio quality with best handling. Therefore we designed a linear, low distortion microphone preamp offering a linear frequency response from 10Hz- 40kHz and waterproof up to 100 meters.

The **ASF-2 MKII** Hydrophone is affordable, easy to use – and simply a great sounding hydrophone. Designed with key components used in the renowned ASF-1 MKII, the ASF-2 MKII effectively utilizes the same professional hydrophone technology for outstanding underwater audio capture. With a frequency range of 70Hz-20kHz, we designed a microphone able to capture a perfect spectrum of sounds while effectively avoiding low frequency noise created by cable handling and is and waterproof up to 30 meters.

MICROPHONES

The “**Emesser**” **ATE308** is a very small “figure-of-eight” microphone intended to convert any boom mike on the fly into a M/S stereo system. Featuring a high quality real condenser powered on +48V phantom, it delivers an enhanced dynamic range required for critical recordings. The ATE308Set comes complete with mounting clip (ATEC-R) and Y-cable (ATEK), which outputs both M and S signals in a standard balanced XLR 5-pin. Including all the necessary accessories and allowing continued use of the existing shotgun mike, suspension and windshield it offers a very economic solution for those who don’t want to part with their favored shotgun to go stereo.

While offering a remarkable frequency range from 20Hz to 18kHz the **ATM216 TinyMike** microphone only weights 30g. With its lengths of 14cm and a diameter of less than 8mm the ATM216 is even smaller than most pens. Thanks to it’s “hyper cardoid” directivity the ATM216 TinyMike captures crystal clear sound from the front while eliminating the ambient noise coming from the side.

A-RAY SURROUND SUSPENSION AND ACCESSORIES

A-Ray is a unique, portable microphone support allows the user to place 5 microphones (6th center surround arm optional available) at distances from 50 cm to over 2 meters apart in different configurations. The construction uses a central rectangular axis, telescopic arms and special sliding nodes with toothed flanges and quick release skewers that provide fast and easy set up. By arranging the nodes in plane or perpendicular, it is possible to create well known multiple microphone configurations such as Surround Sound, Decca Tree and others including experimental 3D-Audio arrays.

The experimental character is emphasized by the possibility of adding more nodes to achieve setups with 7, 8 or 9 microphones. Made of aluminum and carbon fiber, the A-RAY is lightweight while very strong, and folds down to a nicely-compact state for storage or transport in the included carrying pouch.
